CAREER OBJECTIVE

Final-year Computer Science Engineering student seeking a Software Engineer role at Infosys, with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming. Skilled in SQL and software development practices, with hands-on experience solving 320+ algorithmic problems and building end-to-end applications. Committed to writing clean, efficient code, strong problem-solving ability, and continuous learning in a fast-paced engineering environment.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Core CS Subjects: Data Structures, Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Computer Networks, Software Engineering

Databases: SQL, Relational Database Design

Software Development: Software Testing, Debugging, REST APIs, Version Control, Agile Team Collaboration

AI / ML: Machine Learning, Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Prompt Engineering

Tools: Git, GitHub

INTERNSHIP EXPERIENCE

Agentic AI Intern — Capabl Technologies

- Contributed to Subject Guide Scholar AI, an agentic AI-based educational assistant, by designing prompt engineering workflows to guide LLM behavior
- Built and refined RAG-based retrieval components to improve the accuracy and relevance of AI-generated responses
- Debugged and tested AI workflows, identifying failure cases and iterating on prompts to improve output quality
- Collaborated with mentors and team members to review implementation decisions and align development with project goals

Generative AI Intern — Internshala

- Learned and applied prompt engineering techniques to design effective generative AI interactions
- Built and tested generative AI applications, gaining hands-on experience with real-world AI workflows
- Validated solution reliability through structured testing, identifying and resolving functional issues

PROJECTS

Subject Guide Scholar AI | Python, RAG, Vector Search, LLMs | Developed during Capabl Technologies internship

- Problem:** Students needed an efficient, context-aware way to retrieve accurate information from large volumes of academic material
- Solution:** Built an AI-powered educational assistant using Retrieval-Augmented Generation (RAG) to surface accurate, context-specific answers
- Engineering contribution:** Designed a document processing pipeline and implemented vector search for context-aware retrieval; structured the system with a modular architecture to support scalability
- Impact:** Improved the accuracy and relevance of retrieved academic information for end users

Course Information Assistant using Generative AI | Python, Generative AI, Replit | Developed during Internshala internship

- Problem:** Students needed a fast way to look up detailed course information, including Course Outcomes (COs), without manually searching through academic documents
- Solution:** Built a generative AI application on Replit that returns detailed course descriptions and Course Outcomes based on a user-entered course name
- Implementation:** Designed prompt-based interactions to generate accurate, structured responses using a generative AI model, deployed and tested on the Replit platform
- Impact:** Enabled users to quickly retrieve accurate course descriptions and Course Outcomes, reducing time spent searching academic material

RELEVANT COURSEWORK

Data Structures & Algorithms • Object-Oriented Programming • Database Management Systems • Operating Systems • Computer Networks • Software Engineering

CERTIFICATIONS

- Generative AI Certification — Internshala
- Agentic AI Certification — Capabl Technologies
- Kaggle Machine Learning Certification

EDUCATION

Bachelor of Technology in Computer Science Engineering

Anil Neerukonda Institute of Technology and Sciences, Visakhapatnam
